

How did the Dysport Insta-Lift come about?

His special method of using Dysport came about when Dr Lee Young Seob was trying to avoid causing the stiff, expression-less faces that were common with traditional intra-muscular Botox injections (his clientele involved a lot of Korea / Hongkong / China celebrities who needed to look good and yet still be able to make facial expressions for work), and started experimenting with diluted Dysport injected into the skin cells instead of the traditional method into the muscles. What happened next was amazing – not only was there a skin-tightening effect causing a facelift, There were immediate results noticed right after injection and which improved further in the next 7 – 14 days.

How long does a session of Dysport Insta-Lift last?

1 session of Dysport Insta-Lift lasts between 6 months to 12 months, depending on the skin and the underlying buckle activity.

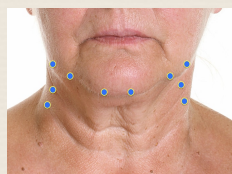

Where else can the Dysport Insta-Lift work?

1. Accentuate the jawline
2. Slim down and contour the sides of the lower legs and ankles
3. Create an instant butt lift without surgery or fillers

What is the Nefertiti Lift?

The Nefertiti neck lift is a new technique where by placing multiple injections of Botox along the lower jawline as well as down the side of the neck along the platysma muscle. This will block the downward movement of the face. It is possible to improve the definition of the jawline, rebalance the underlying muscles and provide 'lifting' in the neck and jaw area. Well defined jawline with a long neck has been a sign of beauty since the time of the Egyptians. This new procedure which creates a well toned,

smooth neck, and lifted jawline was named after Queen Nefertiti, whose bone structure continues to be admired in modern times. Once these

muscles are relaxed the net effect is an upward pull from facial muscles, creating a younger looking jawline, neck and face. For a lasting result the treatment needs to be repeated every 3 to 4 months.

What is the Dysport Insta-Lift?

Dysport Dermolift was originally invented by Dr Lee Young Seob of Seoul, South Korea. It involves injecting diluted Dysport into the intra-dermal layer, which stimulates and re-organises the cellular cytoskeleton of the skin cells, to bind to more elastin and collagen. It also stimulates the fibroblast cells in the skin to produce more collagen. The end result? An instant tightening and face-lifting effect, which gets better in the next 7 days.

The Dysport Insta-Lift, as its name suggests, creates an immediate skin-tightening and lifting effect. Therefore, we are talking about an instant facelift with just a few injections of DILUTED DYSPOORT. The results improve and get even better in the next 7-14 days.

When can I see the results of the Dysport Insta-Lift?

The Dysport Insta-Lift, as its name suggests, creates an immediate skin-tightening and lifting effect. Therefore, we are talking about an instant facelift with just a few injections of DILUTED DYSPORT. The results improve and get even better in the next 7-14 days.

Is there any downtime?

There is no downtime at all. It was invented for actresses who could not spare any downtime in between filming, and if it is good enough for them, it definitely is good enough for you! The injection spots will be present for only a few hours before healing.

Who is suitable for the Dysport Insta-Lift?

CLIENTS WHO ARE SUITABLE INCLUDE

:

1. Those in their 20s-30s with very mild skin wrinkling and sag – they still have good amounts of collagen in their skin and thus respond best to the Insta-Lift
2. Those who want a no-downtime instant facelift
